

Evaluation of societal impact and usefulness of research and education

One of the main objective of the NextFood project is to deliver tool for evaluating peer-reviewed output of practice-oriented research and education. In order to develop such a framework to measure performance of practice-oriented research outputs focusing on sustainability (ecological, economic, social) and practical usefulness rather than on their scientific character, and to find ways that boost the incentives for interactive innovation, multi-stakeholder approaches and practice-oriented research we first provide a review insight on the current state-of-the-art.

NextFood project aims to close the gap between university education and agriculture and forestry practice by applying cyclical learning approaches, action research and education, and knowledge co-creation. We thus provide a review on development and different approaches to action research and education which summarizes recent trends in this field. This requires a holistic approach to education with regard to learning contents, teaching methods, cultural and social dimensions of the learning environment.

VISIT WEBSITE

Our literature search has provided following key findings which should be retained when designing above mentioned peer-review evaluation tool.

- ***Ex-ante evaluation should be preferred to ex-post evaluation***
 - ***Constructivistic assessment approach should be prioritized to positivistic assesment approach***
 - ***Social impact performance and sustainability of action research and education should be considered as a cornerstone for evaluation tool of practice oriented***
-

The results of the review will be used for the development of a new framework for the assessment of applied research and education.
