Nextfood - Educating the next generation of professionals in the agrifood system

Practice Abstract #26: The NextFood Toolbox - Tools for practitioners in action-learning activities

Author: Åsmund Læg Reid Steiro an and Lutgart Lenaerts, NMBU, Norway

The Nextfood Toolbox is now available for everyone to check out on the project platform (<https://www.nextfood-project.eu/nextfood-platform/>).

It is intended to support teachers at any level of the education system who are eager to test out various aspects of the Nextfood educational approach. The toolbox diagram is the initial interface of the toolbox where users can click on each of the competences to explore relevant material related to them. For each competence there are both examples of how to train them and descriptions of what they mean. There are also instructional videos! Whether a course is week-long or spans several months, participating educators will find examples of teaching materials suited to train all the competences within the context of action learning.

The toolbox will be updated continually throughout the project with new content, so feel free to explore the current version and stay tuned for future updates!
