Nextfood - Educating the next generation of professionals in the agrifood system

Practice Abstract #57: Nextfood Audit Tool – self-assessment and reflection

Authors: [Stine Rosenlund Hansen, Ivanche Dimitrevski, Parthib Basu]
[Author 1: Roskilde University, Author 2: Lund University, Author 3: University of Calcutta]

Agri-food and forestry sectors develop rapidly, while facing complex challenges such as globalization and climate change. Educational actors must adapt to facilitate the development of the skills and competences that students need to operate as professionals in these sectors in the future.

For this purpose, NextFood has developed the NextFood Audit Tool, which is designed to generate awareness and reflection among educational actors.

The Audit Tool consists of three interconnected parts:

In the first part, users provide background information on professional roles, gender, age, work experience, and type of education. This will enable perspectival analyses of the results and comparisons.

The second part is a self-assessment tool, where users will rank how their programme, course, or other educational activity perform in relation to achieving the needed skills and competences.

The third part introduces reflection exercises, designed to engage educators in reflection on various ways to develop their educational activities further.

The Audit tool provides educational actors insights regarding their capacities to contribute towards developing a next generation of agri-food and forestry professionals, by ensuring that education and training systems are fit for purpose and continuously updated.

Nextfood - Educating the next generation of professionals in the agrifood system

Practice Abstract #57 Herramienta de auditoría de alimentos - autoevaluación y reflexión

Authors: [Stine Rosenlund Hansen, Ivanche Dimitrievski, Parthib Basu]
[Author 1: Roskilde University, Author 2: Lund University, Author 3: University of Calcutta]

Los sectores agroalimentario y forestal se desarrollan rápidamente, al tiempo que se enfrentan a complejos retos como la globalización y el cambio climático. Los actores educativos deben adaptarse para facilitar el desarrollo de las habilidades y competencias que los estudiantes necesitan para operar como profesionales en estos sectores en el futuro.

Para ello, NextFood ha desarrollado la Herramienta de Auditoría NextFood, que está diseñada para generar conciencia y reflexión entre los actores educativos.

La Herramienta de Auditoría consta de tres partes interconectadas: En la primera parte, los usuarios proporcionan información de fondo sobre las funciones profesionales, el género, la edad, la experiencia laboral y el tipo de educación. Esto permitirá realizar análisis de perspectiva de los resultados y comparaciones.

La segunda parte es una herramienta de autoevaluación, en la que los usuarios clasificarán el rendimiento de su programa, curso u otra actividad educativa en relación con el logro de las habilidades y competencias necesarias.

La tercera parte presenta ejercicios de reflexión, diseñados para que los educadores reflexionen sobre las distintas formas de desarrollar sus actividades educativas.

La herramienta de auditoría proporciona a los agentes educativos información sobre sus capacidades para contribuir al desarrollo de la próxima generación de profesionales del sector agroalimentario y forestal, garantizando que los sistemas de educación y formación sean adecuados y se actualicen continuamente.
